U.S. DEPARTMENT OF COMMERCE Frederick H. Mueller, Secretary BUREAU OF THE CENSUS

UNITED STATES FOREIGN TRADE

SUMMARY REPORT FT 930-E

OCTOBER-1960

FOR RELEASE December 13, 1960

EXPORT TRADE BY COMMODITY

The Bureau of the Census, Department of Commerce, announced today that the increase in United States exports of domestic merchandise from \$1,594.6 million in September to \$1,729.4 million in October, a gain of about eight percent, reflected increases in exports of finished manufactures, crude materials and manufactured foodstuffs. The domestic merchandise export total in October was about 18 percent higher than the October 1959 total of \$1,465.9 million. Data on M.S.P. (millitary) shipments are included in these totals.

With M.S.P. (military) shipments excluded, exports of domestic merchandise were valued at \$1,675.5 million in October, a level about nine percent higher than the September total of \$1,541.0 million and about 21 percent higher than the October 1959 total of \$1,382.2 million.

Exports of <u>finished manufactures</u> rose from \$876.0 million in September to \$958.9 million in October largely as a result of increases in exports of individual commodities included in this economic class as follows: passenger cars, from \$9.0 to \$26.5 million; merchant ships, from \$0.6 to \$13.7 million; motor trucks

and buses, from \$21.3 to \$26.9 million; machine tools and parts, from \$13.4 to \$18.8 million; power generating machinery, from \$14.6 to \$19.2 million; office, accounting, and computing machines and parts, from \$16.9 to \$21.2 million; radio and television apparatus, from \$24.4 to \$28.5 million; and railway transportation equipment, from \$8.3 to \$12.3 million. These increases were partly offset, however, by a drop in exports of aircraft, parts, and accessories, from \$116.0 to \$86.7 million. The rise in exports of crude materials from \$188.3 to \$239.3 million was mainly the result of higher levels of exports of unmanufactured cotton, from \$26.3 to \$59.4 million; and oilseeds from \$20.7 to \$37.8 million. An increase in exports of milled rice, from \$4.2 to \$11.7 million, accounted for most of the gain in exports of manufactured foodstuffs from \$96.8 to \$102.3 million.

During the period, exports of <u>semimanufactures</u> fell from \$287.8 to \$285.2 million owing chiefly to a drop in exports of copper semimanufactures, from \$30.2 to \$24.5 million. The slight decline in exports of <u>crude foodstuffs</u> from \$145.7 to \$143.8 million was largely the result of a decrease in exports of wheat, from \$84.0 to \$77.2 million which was partly offset by an increase in exports of corn, from \$17.4 to \$20.6 million.

EXPLANATION OF STATISTICS

COVERACE: Export statistics include government as well as non-government shipments to foreign countries. The export statistics, therefore, include Mutual Security Program military aid, Mutual Security Program economic aid and Department of the Army Civilian Supply shipments. Separate figures for Mutual Security Program military aid are shown in the footnotes of this report. Shipments to United States armed forces and diplomatic missions abroad for their own use are excluded from export statistics. United States trade with Puerto Rico and United States possessions is not included in this report, but the export trade of Puerto Rico with foreign countries is included as a part of the United States export trade. Merchandise shipped in transit through the United States between foreign countries is not included in export statistics.

VALUATION: The valuation definition used in the export statistics is the value at the seaport, border point, or airport of exportation. It is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port of exportation. Transportation and other costs beyond the United States port of exportation are excluded. However, in some instances the valuation may not be reported in accordance with this definition, particularly where the export value is difficult to determine or must be estimated. None of the values have been adjusted for changes in price level.

EFFECT OF SAMPLING: The value of export shipments individually valued at \$100-\$499 (about five percent of total export value) is estimated by sampling. Effective with the statistics for January 1960, the previous sample ratio of 10 percent has been increased to a 50 percent sample for countries other than Canada with the 10 percent sample being retained for Canada. The estimated values are distributed among the individual commodity totals. For the 1960 export figures in this report, the probable variability due to sampling is less than \$50,000 or less than a trivial percentage which can be ignored. For periods prior to 1960, the probable variability due to sampling is less than \$50,000 or less than two percent of the individual totals shown. The largest variation from rounding of figures is \$50,000. For further information regarding sampling procedures, see the September 1953, February 1954, January and June 1956, and the October-December 1959 issues of Foreign Trade Statistics Notes.

Further information regarding coverage, valuation, etc., is contained in the "General Explanation" in foreword of Report No. FT 410. For complete statement, see foreword in Foreign Commerce and Navigation of the United States.

Includes \$53.9 million of Military Mutual Security Program shipments (\$21.0 million to Western Europe).

Includes \$53.6 million of Military Mutual Security Program shipments (\$25.5 million to Western Europe).

*Includes \$102.3 million of Military Mutual Security Program shipments (\$36.1 million to Western Europe).

*Includes \$128.6 million of Military Mutual Security Program shipments (\$54.9 million to Western Europe).

*See the April 1958 issue of Foreign Trade Statistics Notes for explanation of Special Categories and list of commodities included.

*For security reasons, data on exports of all forms of uranium, thorium and special nuclear material (Schedule B commodity numbers 62510-62590) are excluded from export statistics.

*Includes data for Schedule B commodity numbers 30399 and 30855, converted to square yards on the basis of four square yards per pound; and B number 30610, converted to square yards per basis of three square yards per pound.

*Figures are revised to correct erroneous inclusion of data for Schedule B commodity number 79080 (Commercial maintenance and repair trucks, new) in the totals for "All other finished manufactures" rather than "Military automobiles, trucks, busses, trailers, parts, accessories and service equipment; commercial maintenance and repair trucks, new" in the issues of Report No. FT 930-E for periods prior to January 1960.
